A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.

The orientation of the sequence is from -21M13 to M13rev of the BAC clone. This sequence of OSJNBBOOSSLII clone has an overlap with P0016F11 (DDBJ: AP005303) clone at 5' end and with OJ1293_E04 (DDBJ: AP004120) at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Join(210. .282,431. .528,603. .662)

NOTE: It currently consists of l contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* This is a "working draft" sequence.

* This sequence will be replaced by the finished sequence as soon as it is a the accession number will be preserved.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC The present sequence encodes for Arabidopsis thaliana C lecithin:cholesterol acyltransferase-like 2 (LCAT2). Several novel C polynucleotides encoding the plant sterol acyltransferases LCAT C (AAS001081-AAS01104, AAS01341) and ACAT (acyl CoA:cholesterol C cacyltransferase-like; AAS01341) and ACAT (acyl CoA:cholesterol C cacyltransferase-like; AAS01341) and acat described. A yeast LCAT C cacyltransferase-like; AAS01341) are described. The polynucleotides encoding C LCAT or ACAT are used to produce LCAT or ACAT polypeptides. They can also be used in a recombinant construct to transform a host cell (preferably of a plant) or a plant. The recombinant construct is used to increase or C calter oil production of the cell or plant, preferably by increasing it.
CC The oil of the plant or the plant itself is used as a food product, or as nutritional or distary supplements, or in pharmaceutical compositions for lowering cholesterol. The oil can be used in foods e.g. margarine, C cheese, processed meat, pasta, sauces, cereals, desserts, dipp, chips, C baked goods, pastries, cookies, snack bars, confections, chocolates, and C perovide a plant with tolerance to stress and insect damage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

CC acyltransferase polypeptide can produce fatty acid esters and/or fatty CC acyltransferase polypeptide can produce fatty acid esters and/or fatty CC monoacylglycerols, phospholipids, glycolipids, lysolipids, waxesters, CC acylated carbohydrates and acylated amino acids. Also described: (1) a nucleotide sequence molecule (II) comprising at least one promoter region CC which functions in a host, where the promoter region is operably linked to at least one (I), which is operably linked to at least one non-CC translated region which functions in a host; (2) a vector comprising (II) CC; (3) a host cell comprising (II) or the vector; (4) producing an CC improved active membrane independent acyltransferase polypeptide, CC comprising providing the above host cell and a growth medium preparing a host cell culture, culturing the host cell culture and harvesting the cCC host cell culture and recovering the improved active membrane independent acyltransferase polypeptide; (5) a polypeptide obtained by the method in CC (4), where the polypeptide at least is an improved active membrane CC independent acyltransferase polypeptide; (6) an oligonucleotide comprising the above polypeptide; (6) an oligonucleotide comprising the above polypeptide and a stabiliser. The nucleic acid CC molecule (I) and the polypeptide are useful in producing structured CC indictors; and crown and condifying lipids present in animal and plant raw material. The present xx sequence is used in the exemplification of the present invention.

(I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one amino acid residue of the membrane-spanning region has been deleted and/or substituted as compared to the original acyltransferase polypeptide, where the encoded active membrane independent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleotide sequence encoding an improved acyltransferase polypeptide, useful for producing structured lipids or fat-soluble molecules, in removing undesirable fat or in modifying lipids in animal or plant raw
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  29-MAY-2002; 2002SE-00001581.

The enzyme is designated as phospholipid discylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence represents the Arabidopsis thaliana PDAT genomic DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence represents the Arabidopsis

                                                                                                                                                                                                                                                                                  The present sequence for corn LCAT (lecithin:cholesterol acyltransferase-CC like) BST sequence #3 is closely related to the Arabidopsis thaliana CC LCATZ sequence. Several novel polynucleotides encoding the plant sterol CC cayltransferases LCAT (AASO01081-AASO1104, AASO1341) and ACAT (acyl CC cayltransferases LCAT (AASO01081-AASO1104, AASO1341) and ACAT (acyl CC cAy.cholesterol acyltransferase-like; AASO1311-AASO1319) are described. A CC yeast LCAT related open reading frame, LRO1 gene sequence (AASO1342), and CC polynucleotides encoding LCAT or ACAT are used to produce LCAT or ACAT (polyneptides. They can also be used in a recombinant construct to construct is used to increase or ACAT are used to produce LCAT or ACAT CC construct is used to increase or decrease the sterol content of the host Ccell or plant. It can be used to alter oil production of the cell or CC supplements, or in pharmaceutical compositions for lowering cholesterol. The oil can be used in foods e.g. margarine, butter, cooking oil, and CC construct self in seed as a food product, or as nutritional or dietary CC supplements, or in pharmaceutical compositions for lowering cholesterol. The oil can be used in foods e.g. margarine, butter, cooking oil, and CC cookies, snack bars, confections, chocolates, and beverages. The cookies, snack bars, confections, chocolates, and beverages. The alteration in sterol content and/or composition can also provide a plant or the plant can be tered content and/or composition can also provide a plant or the plant can be used in finance to attered amarga.

                                                                                                                                                         The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence represents the Lycopersicon esculentum PDAT nucleotide sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                               The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence represents the Lycopersicon
   Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                          The present sequence for corn LCAT (lecithin:cholesterol acyltransferase-CC like) EST sequence #4 is closely related to the Arabidopsis thaliana CC LCATZ sequence. Several novel polynucleotides encoding the plant sterol CC cayltransferases LCAT (AASO01081-AASO1104, AASO1341) and ACAT (acyl CC cAy.cholesterol acyltransferase-like, AASO1311-AASO1319) are described. A CC yeast LCAT related open reading frame, LRO1 gene sequence (AASO1342), and CC yeast LCAT related open reading frame, LRO1 gene sequence (AASO1342), and CC polynucleotides encoding LCAT or ACAT are used to produce LCAT or ACAT CC polypeptides. They can also be used in a recombinant construct to construct is used to increase or decrease the sterol content of the host CC construct is used to increase or decrease the sterol content of the host CC cell or plant. It can be used to alter oil production of the cell or CC cell or plant. It can be used to alter oil production of the cell or CC plant, preferably by increasing it. The oil of the plant or the plant CC itself is used as a food product, or as nutritional or dietary constructs, preferably by increasing it. The oil of the plant or the plant CC itself is used as a food product, or as nutritional or dietary coll can be used in foods e.g. margarine, butter, cooking oil, and CC dressings e.g. salad dressings, mayonnaise, cheese, processed meat, CC pasta, sauces, cereals, desserts, dips, baked goods, pastries, CC cooktes, sanck bars, confections, chocolates, and beverages. The CC alteration in sterol content and/or composition can also provide a plant Y

The present invention describes a nucleotide sequence (I) derived from nucleotide sequence encoding an acyltransferase polypeptide comprising least one membrane-spanning region. (I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one amino acid residue of the membrane-spanning region has been deleted and/or substituted as compared to the original acyltransferase polypeptide, where the encoded active membrane independent acyltransferase polypeptide can produce fatty acid esters and/or fatty acid thioesters such as triacylglycerols, diacylglycerols,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             fatty acid thioester; triacylglycerol; diacylglycerol; monoacylglycerol;

Also described: (1) a CC nucleotide sequence molecule (II) comprising at least one promoter region CC which functions in a host, where the promoter region is operably linked CC to at least one (I), which is operably linked to at least one non-CC translated region which functions in a host; (2) a vector comprising (II) or the vector; (4) producing an CC improved active membrane independent acyltransferase polypeptide, CC comprising providing the above host cell culture and harvesting the cost cell culture and recovering the improved active membrane independent acyltransferase polypeptide at least is an improved active membrane CC (4), where the polypeptide at least is an improved active membrane CC independent acyltransferase polypeptide and a stabiliser. The nucleic acid CC comprising the above polypeptide and a stabiliser. The nucleic acid CC molecule (I) and the polypeptide are useful in producing structured CC lipids or fat-soluble molecules, in removing undesirable fat or in CC modifying lipids present in animal and plant raw material. The present XXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                 CC acid thicesters such as triacylglycerols, diacylglycerols, waxesters, cc acid thicesters such as triacylglycerols, diacylglycerols, waxesters, cc acid thicesters such as triacylglycerols, diacylglycerols, waxesters, cc acylated carbohydrates and acylated amino acids. Also described: (1) a nucleotide sequence molecule (II) comprising at least one promoter region which functions in a host, where the promoter region is operably linked to at least one (I), which is operably linked to at least one for translated region which functions in a host; (2) a vector comprising (II) cc translated region which functions in a host; (2) a vector comprising (II) (2); (3) a host cell comprising (II) or the vector; (4) producing an cc improved active membrane independent acyltransferase polypeptide, cell culture and recovering the host cell and a growth medium preparing a host cell culture, culturing the host cell culture and harvesting the host cell culture membrane independent cc acyltransferase polypeptide; (5) a polypeptide obtained by the method in cc acyltransferase polypeptide; (6) an oligonucleotide comprising the above polypeptide at least is an improved active membrane cc independent acyltransferase polypeptide; (6) an oligonucleotide specifically hybridising to (I) under stringent conditions; and (7) a kit comprising the above polypeptide are useful in producing structured clipids or fat-soluble molecules; in removing undesirable fat or in condifying lipids present in animal and plant raw material. The present conditions used in the exemplification of the present invention.
                                                                                         Matches
                                                                                                                                  Query Match
                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              amino acid residue of the membrane-spanning region has been deleted and/or substituted as compared to the original acyltransferase polypeptide, where the encoded active membrane independent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleotide sequence encoding an acyltransferase polypeptide comprising least one membrane-spanning region. (I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleotide sequence encoding an improved acyltransferase polypeptide, useful for producing structured lipids or fat-soluble molecules, in removing undesirable fat or in modifying lipids in animal or plant raw
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 12; SEQ ID NO 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2004-053268/05

The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence encodes yeast (Saccharomyces

                                      The present invention describes an enzyme for catalysing (in an acyl-Colindependent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content this cell or organism. The present sequence represents the yeast (Saccharomyces cerevisiae) PDAT gene

The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for
                                                                                                  Claim
                                                                                                                                 Phospholipid:diacylglycerol acyltransferase enzymes in the biosynthetic pathway for triacylglycerol production and DNAs encoding them, useful for producing triacylglycerol, or for transforming any cell or organism to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC A rat ACAT-like CDNA sequence (AASO1105) is also described. The CD polynucleotides encoding LCAT or ACAT are used to produce LCAT or ACAT CC polypeptides. They can also be used in a recombinant construct to construct is used to increase or decrease the sterol content of the host CC construct is used to increase or decrease the sterol content of the host CC cell or plant. It can be used to alter oil production of the cell or CC cell or plant. It can be used to alter oil production of the cell or CC plant, preferably by increasing it. The oil of the plant or the plant CC itself is used as a food product, or as nutritional or dietary CC supplements, or in pharmaceutical compositions for lowering cholesterol. CC The oil can be used in foods e.g. margarine, butter, cooking oil, and CC dressings e.g. salad dressings, mayonnaise, cheese, processed meat, CC pasta, sauces, cereals, desserts, dips, baked goods, pastries, CC cookies, sanck bars, confections, chocolates, and beverages. The CC alteration in sterol content and/or composition can also provide a plant or the content and the content
acyltransferase; enzyme; membrane-spanning region;
active membrane independent acyltransferase; fatty acid ester;
fatty acid thioester; triacylglycerol; diacylglycerol; monoacylglycerol;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1986
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (LRO1) is described in an invention relating to several novel polynucleotides encoding the plant sterol acyltransferases LCAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 5; Page 116-117; 127pp; English

CC acyltransferase polypeptide can produce fatty acid esters and/or fatty CC acid thioesters such as triacylglycerols, diacylglycerols, waxesters, CC monoacylglycerols, phospholipids, glycolipids, lysolipids, waxesters, CC acylated carabohydrates and acylated amino acids. Also described: (1) a comcleotide sequence molecule (II) comprising at least one promoter region which functions in a host, where the promoter region is operably linked to at least one (II), which is operably linked to at least one non-cc translated region which functions in a host; (2) a vector comprising (II) (2); (3) a host cell comprising (II) or the vector; (4) producing an cimproved active membrane independent acyltransferase polypeptide, (CC comprising providing the above host cell and a growth medium preparing a comprising providing the host cell culture and harvesting the comprising the least or an improved active membrane independent acyltransferase polypeptide, (5) a polypeptide obtained by the method in cell culture and recovering the improved active membrane independent acyltransferase polypeptide; (6) an oligonucleotide comprising the above polypeptide and a stabiliser. The nucleic acid completed in and the polypeptide are useful in producing structured clipids or fatt-soluble molecules, in removing undesirable fat or in codifying lipids present in animal and plant raw material. The present conditions is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       amino acid residue of the membrane-spanning region has been deleted and/or substituted as compared to the original acyltransferase polypeptide, where the encoded active membrane independent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleotide sequence encoding an improved acyltransferase polypeptide, useful for producing structured lipids or fat-soluble molecules, in removing undesirable fat or in modifying lipids in animal or plant raw
                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleotide sequence encoding an acyltransferase polypeptide comprising least one membrane-spanning region. (I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                29-MAY-2002;
